

Session one of the data analytics with SAS course concluded today after marking one week of intense training in programming with SAS.

Conducted by Mr. Arnoux van Rensberg, the training revolved around “data management”, whose aspects ranged from “SAS Programs”, “Producing Detail Reports”, “Manipulating Data” , “Combining Data Sets” to “Learning More”.

And though considered at the very beginning as “difficult”, the elements of the course could still be grasped as the days progressed.

Indeed the trainees reported having learnt a lot by the end of the day. They were then ready to grapple with what some called “really matters”, come next week.

The parts of the course in question will be data mining, statistics, among others.
